17:10 to: *Clarissa (UK) - @clissa89*
i can imagine!! i was very fortunate to have a research supervisor who challenged assumptions frequently but i love the analogies here!

17:25 to: *Linda renton*
yes me too

20:58 to: *Michelle Perryman*
I have the same as @clarissa.. Constant questioning and challenging but worth it.

23:07 to: *Matthew Molineux (Australia)*
John, thanks for that presentation –it was great. Two comments / questions...

1. While you made complete sense and I think I agree with all that you said, in our universities and in our wider resear

23:07 to: *Matthew Molineux (Australia)*
ch communities, there are people who believe there is only one way to do research and that is quantitative. Any tips on how to engage with people who view research in that way?

2. Doesn' that poin

do you highlight that qualitative and quantitative are two different ways of seeing the world and so are different 'paradigms' that underlie researchers' views and methodologies? I therefore wonder if th

23:07 to: *Matthew Molineux (Australia)*

is there a distinction to be made –qual / quant as methods versus qual / quant as research paradigms?

23:23 to: *John Paley*

Yes, but its quite long.

25:04 to: *Matthew Molineux (Australia)*

I agree, it's both sides.

25:13 to: *Anita (@VirtualOT)*

So it is a philosophical distinction?

25:33 to: *Anita (@VirtualOT)*

the types of questions you seek to answer

No probs Bill, Welcome back

26:49 to: *Anita (@VirtualOT)*

Maybe I meant, the kinds of things you want to find out about

26:52 to: *Michelle Perryman*

in result of Matthews question do you not think qualitative and quantitative research compliment eachother in the views of paradigms? Do you think this may relate to wider population?

26:55 to: *Anita (@VirtualOT)*

26:55 to: *Bill Wong @BillWongOT*

I notice that some people care about numbers more than feelings... so therefore they seem to be drawn towards different types of questions

your comment about tribalism

30:32 to: *Michelle Perryman*
by utilising mixed methods do you think this would support the views of the different worlds (paradigm) and accommodate to both types of views?

30:42 to: *Anita (@VirtualOT)*
I care more about how people feel about doing a certain task than I care about the number of people that do a certain task...

31:08 to: *Matthew Molineux (Australia)*
I don't think use of the tool is the issue, it's the assumptions people have which lead them to choose a particular tool and ignore others.

text

31:32 to: *Enrique Henny*

Some times quantitative research is using before qualitative research is done then variables (for example) are not suited for the population where the research is applied. I am talking from non englis

31:32 to: *Enrique Henny*

h speaking countries that are under strong influences from other countries. So there is a trend toward qualitative research here in Chile. What are your thoughts about this situation?

31:40 to: *Enrique Henny*

yes

33:50 to: *Enrique Henny*

thank you

33:56 to: *Linda renton*

I am a 3rd year OT student at QMU edinburgh - How do you make quantative research more accessible to students who struggle with numbers, I am put off looking at Quant research because of this? Any adv

What a great talk John. We are taking away the importance of the question

41:52 to: *Robert Pereira*

Hi John. I'm a researcher who uses discourse analysis. What are your thoughts about the methodology behind the method? I believe that I need methodological guidance to help me work out why I am using

41:52 to: *Robert Pereira*

a particular set of tools (methods) to analyse discourses. Otherwise, my method is just based on a list of questions. How to understand methodologies has helped me significantly with using discourse a

analysis.

42:49 to: *Sarah Bodell*

type away again, thank you

43:08 to: *Anita (@VirtualOT)*

Sarah, I am turning off chat when you say that :)

43:20 to: *Samar Hassani*

do you think that quantitative research can help us control for confounding variables rather than relying entirely on participant perception?

43:36 to: *Clarissa (UK) - @clissa89*

ooh anita's still on the ball :D

43:44 to: *Anita (@VirtualOT)*

;))

43:47 to: *Robert Pereira*

I'm referring to policy analysis, sorry

44:10 to: *Linda renton*

The students here like the way you always say you need to "talk" the question through so much. Logical!

44:17 to: *Michèle Verdonck*

Anita should be asleep but she is a phd student early morning productivity is the norm

44:59 to: *Anita (@VirtualOT)*

Early morning?? Michele, it's whenever I can grab an hour at the moment
